The Symposium on Design, Test, Integration and Packaging of MEMS/MOEMS (DTIP) was held in Aix-en-Provence, France, 11–13 May 2011, as a follow up to previous issues held in 1999 and 2000 in Paris, France, in 2001, 2002, 2003 in Mandelieu-La Napoule, France, in 2004 and 2005 in Montreux, Switzerland, and in 2006, 2007 in Stresa, Italy, in 2008 in Nice, France, in 2009 in Rome, Italy and in 2010 in Seville, Spain. This series of Symposia is a unique single-meeting event expressly planned to bring together participants interested in manufacturing microstructures and participants interested in design tools to facilitate the conception of these microstructures. The Symposium is traditionally composed of two conferences running in parallel: one on CAD, Design and Test (CDT), and another one on Microfabrication, Integration and Packaging (MIP). In addition, participants of both conferences can attend invited talks and special sessions.

This Special Issue is collecting reviewed and unabridged versions of papers presented at the Symposium. The papers have been again refereed, along the usual refereeing process in force at Microsystem Technologies. We are proud to offer these papers to the readers of this journal now.

From 28 revised papers submitted to this Special Issue, 22 papers have been finally selected. They cover a broad range of topics. They appear successively in seven categories. There are three papers on Piezoelectric power generation and sensing, three papers on modeling, five papers on fabrication, three on embossing, two on BioMEMS, two on sensors, three on reliability and measurement, and finally one on packaging.

We hope that you enjoy these contributions as much as we did.
