This special issue is devoted to Smart Systems. It has been an exciting opportunity to collect together papers from authors who were invited to present talks at the 4th International Conference of Smart Systems Engineering 2016, from October 13 (Thu)–14 (Fri), 2016 at MIRAI hall, Frontier Center for Organic Materials (11th building), Faculty of Engineering, Yamagata University, Yonezawa, Japan. This conference attracted scientists and researchers from all over the world, who presented and discussed the challenges and emerging technologies in the smart materials, devices, and systems.

We would like to thank Prof. Bungo Ochiai (SmaSys 2016, conference chair), all the organizing committee members, specially iFront staff and students for their effort to make this conference and special issue a success.

We would like to acknowledge the sponsors of the conference: Japan Society for the Promotion of Science (JSPS), Ministry of Education, Culture, Sports, Science and Technology, Japan (MEXT), The Society of Polymer Science, Japan (SPSJ), Life-3D Printing Innovation Center (LPIC, Yamagata University, Soft and Wet Matter Engineering Laboratory (SWEL, Yamagata University), Yonezawa Alumni Association (Yamagata University), Yonezawa Convention Bureau, Total Assistance for Seasonal Foods Transportation from Yamagata (TASTY, Yamagata University), Frontier Center for Organic System Innovations (Yamagata University) and Graduate School of Science and Engineering (Yamagata University).

We would like to thank Venkat Ganesan from Microsystems Technologies Journals Editorial Office, for his assisting in making this special issue a success.

We look forward to your participation in future special issues of Smart Systems.
