It has just been brought to our attention by Mr. R. Arun, following the online publication of our case report, that aspects of this case had previously been presented in a poster at the EuroSpine meeting in Barcelona in 2005.

Problems in the surgical management of lactobacillus cervical osteomyelitis following esophageal perforation. R. Arun, SMH Mehdian, RWD Kerslake.

We were not aware of this poster presentation until now, and it did not appear during the literature searches we performed while writing the article. Other than our case report, there has been no other work published in the written literature about this case.

This addendum refers to the article doi: [10.1007/s00586-009-0889-9](https://doi.org/10.1007/s00586-009-0889-9).
