It is about an original book giving of the demographic data on the various types of fractures. This book is based on the results of the multicentric studies of 83 hospitals in China. The author uses the classification of the AO to describe the various fractures. The use of drawings, radiographies, tables and diagrams returns this book on the difficult subject easy to read. For each bone and sometimes each type of fracture, the author gives us demographic information about the causes, the organic diagnoses, the mechanisms

and the therapeutic options. The various chapters treat upper limbs and lower, column, basin. Specific chapters relate to the hand and the foot. This book will interest as well the students as the experienced researchers or surgeons.

Compliance with ethical standards

Conflict of interest None.
