### Erratum to: Eur J Orthop Surg Traumatol DOI 10.1007/s00590-017-2021-x

The author would like to correct the errors in the publication of the original article. The corrected details are given below for your reading.

In “Patients and methods” section, third paragraph should read as:

The initial acetabular fracture pattern was classified according to the system of Judet et al. [8]; there were nine cases of simple type and twelve cases of associated type. Seventeen patients were treated by ORIF, while 4 were managed conservatively.

In “Surgical technique” section, first paragraph should read as:

All patients were surgically exposed by using Kocher–Langenbeck approach, and the hardware was partially removed in three patients and left in situ in 18 patients. Swap for culture and sensitivity was done when infection was suspected.

In “Discussion” section, last sentence of the second paragraph should read as:

In fact, their data demonstrated cup revision rate of 13.7% and loosening rate of 49% with 27% of those hips having symptomatic loosening.
