After a recall of the principles of the orthopedic rheumatology, the authors present us successively the indications and the techniques recommended for the rheumatologic affections of the hand, the wrist, the fingers, the tendons of the wrist and the hand, the elbow, the shoulder, the foot, the ankle, the hip and the spine. Each chapter is illustrated by splendid operational photographs and didactic anatomical drawings.

This true monument of the rheumatologic surgery current will have to appear in the library of the specialized

surgeons, in particular of the hand and the foot, as in that of the rheumatologists regularly confronted with this invalidating pathology.

Compliance with ethical standards

Conflict of interest The author declares that they have no competing interests.
