Severe delayed diffuse cerebral vasospasm and cerebral infarctions following spinal subdural hemorrhage

M. Setzer, S. Weidauer, M. Zimmermann, J. Berkefeld, V. Seifert, and A. Raabe

[Acta Neurochir (Wien) (2004) 146: 517–520]. DOI 10.1007/s00701-004-0233-4

In this paper, the legends of Figs. 2 and 3 erroneously have been changed. The correct representation is as follows:

Fig. 2. Axial CT scan at day 1 showing no subarachnoid blood clots in the basal cisterns or the remaining subarachnoid space

Fig. 3. (a) Axial diffusion – weighted MRI revealing cerebral infarctions, in both PCA territories and the right MCA territory. (b) Coronal scans show additional infarcts in both ACA territories
