The authors discovered post-publication that the data submitted was incorrect. According to the study data, the patients were all IV lupus nephritis patients. However, on further review, the authors found that some patients in the study were not IV lupus nephritis, which meant that

the diagnosis was wrong and the clinical data and the levels of thrombomodulin and vascular cell adhesion molecule-1 were not correctly reported. The authors apologize for this error, and have requested the manuscript to be withdrawn.
