This special issue contains selected papers of the XXVIII. Hungarian Operations Research Conference that went through the usual refereeing process according to the policy of CEJOR. This national OR conference took place at Balatonőszöd, between 8 – 10 June, 2009. The primary organizer of this conference was the Hungarian Society for Economic Modeling (HSEM), collaborating with the Hungarian Operations Research Society (HORS) and János Bolyai Mathematical Society. The chairman of the organizing committee was Csák Ligeti, president of HSEM, and the head of the Program Committee was József Vörös, the former chairman of the Society. The number of participants was close to 100, and the scientific program comprehended three plenary talks and 55 presentations in two parallel sessions. The language of the conference was Hungarian. More information and some of the presentations can be found at the home page <http://www.gazdasagmodellezes.hu/index.php/konferenciak> (in Hungarian).

The scope of the conference involved several aspects of operations research: a good mixture of theoretical results and successful applications were presented. Sorting out the best papers of the conference, the aim of this special volume is to demonstrate the current strength of the Hungarian operations research community. Some other results will be published in two other scientific journals (Alkalmazott Matematikai Lapok and Szigma) in Hungarian language.

This is the fifth time that CEJOR publishes the main results of these conferences, and we hope that this tradition provides values for the OR community in Central Europe and beyond. The editors of the special issue thank referees for their efforts with which they contributed to the increased quality of this volume. Twelve manuscripts were submitted for this special issue, out of which seven were accepted for publication.

The composition of the special issue reflects more or less the versatility of the conference subjects. We have three papers mostly on multi-criteria decision support models (Bozóki et al. 2010; Keri 2010; Temesi 2010), one on Monte Carlo type algorithms (Deák 2010), one on online algorithms (Divéki and Imreh 2010), one on game theory (Forgó 2010), and the last one on the application of convex programming for statistics (Mihályffy 2010).

Budapest, Pécs, and Szeged, July, 2010

Tibor Csendes

Co-Editor of CEJOR

Csák Ligeti

President of the Hungarian Society for Economic Modeling

József Vörös

President of the Programme Committee
