In “Participants and methods” section, Tanaka’s equation should be read as follows:

$$\begin{aligned} &24\text{-h urinary Na excretion mmol/day} \\ &= 21.98 \times \{ \text{UNa mmol/L} / (\text{UCr mg/dL} \times 10) \times (-2.04 \\ &\quad \times \text{age} + 14.89 \times \text{weight kg} + 16.14 \times \text{height cm} \\ &\quad - 2244.45) \}^{0.392} \end{aligned}$$
