An error in sign is corrected in the jump condition on the entropy,

$$\sum_{\alpha} \left[\left[\rho^{\alpha} \eta^{\alpha} \mathbf{u}_{\Gamma}^{\alpha} + \frac{\mathbf{q}^{\alpha}}{\theta} \right] \right] \cdot \mathbf{n} \leq 0 \quad (51)$$

$$\left[\left[\rho \eta \mathbf{u}_{\Gamma} + \frac{\mathbf{h}}{\theta} \right] \right] \cdot \mathbf{n} \leq 0 \quad (52)$$

which also requires the following sign corrections,

$$\left[\left[\rho^{\alpha} \left(\varepsilon^{\alpha} + \frac{1}{2} \mathbf{u}_{\Gamma}^{\alpha} \cdot \mathbf{u}_{\Gamma}^{\alpha} \right) \mathbf{u}_{\Gamma}^{\alpha} - (\mathbf{T}^{\alpha})^T \mathbf{u}_{\Gamma}^{\alpha} + \mathbf{q}^{\alpha} \right] \right] \cdot \mathbf{n} = -\bar{\varepsilon}^{\alpha} \quad (48)$$

$$\left[\left[\rho^{\alpha} \theta \eta^{\alpha} \mathbf{u}_{\Gamma}^{\alpha} + \mathbf{q}^{\alpha} \right] \right] \cdot \mathbf{n} = -\theta \bar{\eta}^{\alpha} \quad (106)$$

$$\left[\left[\rho^{\alpha} \left(\mathbf{K}^{\alpha} + \frac{1}{2} (\mathbf{u}_{\Gamma}^{\alpha} \cdot \mathbf{u}_{\Gamma}^{\alpha}) \mathbf{I} \right) \mathbf{u}_{\Gamma}^{\alpha} \right] \right] \cdot \mathbf{n} = -\bar{\psi}^{\alpha} \quad (108)$$
