We regret that the original article contained a mistake. The original article reported that the two infants we observed were both males. As we only recently discovered, one of the infants (Li) is in fact a female. All reported durations of observed play behavior are correct. Note that this infant's

observed duration of social play falls much more comfortably into the range of social play durations of juvenile females rather than into the range of social play durations of juvenile males. It remains of interest for future studies to ascertain whether sex difference in social play behavior can already be observed during the infant stage of capuchin monkeys, and to what extent social play tendencies remain consistent across the life span.

The online version of the original article can be found under doi:[10.1007/s10329-008-0095-0](https://doi.org/10.1007/s10329-008-0095-0).
