In the original article, a novel approach was used to compare different models based on the sum of ranking differences (SRD). We have ranked the retention data properly but used retention data instead of rank numbers. Thus, the ordering remained correct, the values obtained for the different models are not comparable with other ordering schemes. These values are shown in Table 4. Now, SRD values of Table 4 should read: MLR = 50, PLS = 52, ANN-LM = 50, CR-PCR = 128, CR-PC-ANN-LM = 40, using row average of retention times as reference. However, our conclusion remains. Based on the SRD values, the CR-PC-ANN-LM model with the minimum SRD value is the best one.
