Microsatellite investigation of roe deer (*Capreolus capreolus*) in Scandinavia reveals genetic differentiation of a Baltic Sea Island population

Published online: 17 August 2006
© Springer-Verlag 2006

In the abstract, the significance given for the differentiation between the population in Wittskövle and roe deer from Köpingsvik compared to all other populations should be “ $p < 0.01$,” not $p < 0.1$ as it reads now.
