In our Letter to the Editor, entitled “Anthropological Data Regarding the Adaptiveness of Hebephilia” (Hames & Blanchard, 2012), we neglected to acknowledge Clancy’s (2012) prior *Scientific American* blog post on the issue of the adaptiveness of hebephilia. In that post, she recognized, as did we, the importance of Kramer’s (2008) work on the fitness consequences of hebephilia. Dr. Clancy’s blog post can be found at: <http://blogs.scientificamerican.com/context-and-variation/2012/01/18/interrogating-claims-about-natural-sexual-behavior-more-on-deep-thinking-hebephile/>. We are writing this postscript to call the interested reader’s attention to Dr. Clancy’s piece.
