Erratum to: Arch Sex Behav DOI 10.1007/s10508-014-0457-1

We have discovered that the OR and the Wald statistic in Table 5 for men and suicidal plans are mistakenly the values of the model constant and not the values belonging to the relevant variable. The correct values are: Wald = 1.56; OR = .81, $p = .21$. This also leads to an incorrect line in the section “Mental Health.” The

sentence that requires correction is: “Panel men, compared to community men, reported lower levels of psychological distress, lower levels of suicidal thoughts, and lower levels of actual plans for suicide.” It should read: “Panel men, compared to community men, reported lower levels of psychological distress and lower levels of suicidal thoughts.” We apologize to the readers for any inconvenience caused by our mistake. The correct version of Table 5 is a given below.

Table 5 Differences in mental health characteristics between community and panel sample

	Men		Women	
	OR	Wald	OR	Wald
Psychological distress	.73	25.13***	.81	8.39**
Suicidality				
Suicidal thoughts	.74	23.26***	.92	1.84
Suicidal plans ^a				
No	Ref	Ref	Ref	Ref
Yes	.81	1.56	1.02	.01

The dependent variable was type of sample (0 = community sample; 1 = panel sample). All analyses were controlled for social demographics (age, education, employment, religiousness, ethnicity, and urbanicity). Separate analyses were conducted for psychological distress ($N_{\text{men}} = 2,142$; $N_{\text{women}} = 2,210$), suicidality thoughts ($N_{\text{men}} = 2,138$; $N_{\text{women}} = 2,198$), and suicidality plans ($n_{\text{men}} = 1,041$; $n_{\text{women}} = 1,150$)

** $p < .01$; *** $p < .001$

^a Item was only completed by participants indicating they have had suicidal thoughts
