In the original article equation (3.5) should read

$$\mathfrak{S}_0^0 = \frac{1}{4\pi}(r\lambda_{rr} + r\lambda_{zz} + \lambda_r).$$

Using the relation after equation (1.1), we found

$$\mathfrak{S}_0^0 = 0.$$

The second component in equation (3.7) should read

$$\chi_0^{03} = \frac{2mrz}{R^3}.$$

Consequently, the energy density for the Curzon solution becomes zero.

The abbreviated letters (ELLPBM), in the last paragraph of discussion, becomes (ELLPB).
