Enhancement of polyunsaturated fatty acid production by cerulenin treatment in polyunsaturated fatty acid-producing bacteria

Naoki Morita, Takanori Nishida, Mika Tanaka, Yutaka Yano & Hidetoshi Okuyama

On pp. 391–393 of the original, the following errors occurred in the text and in Table 1:

- p. 391, Figure 1, line 3 of legend: '□, One mg ml⁻¹' should be '□, 0 mg ml⁻¹'
- p. 391, left column, line 5 from bottom: '(12, 1–6.7%)' should be '(12:0, 1–6.7%)'
- p. 391, left column, line 3–4 from bottom: '(14, 10.3–32.5%)' should be '(14:0, 10.3–32.5%)'
- p. 391, left column, bottom line: '(16)' should be '(16:0)'
- p. 391, right column, line 6 from bottom: 'The lipid yield (g l⁻¹)' should be 'The lipid yield (mg l⁻¹)'
- p. 391, right column, line 5 from bottom: '(252–182 g l⁻¹)' should be '(252–182 mg l⁻¹)'
- p. 392, Table 1: fatty acid abbreviations 12, 14, 16 and 18 should be 12:0, 14:0, 16:0 and 18:0, respectively; see correct Table 1 below
- p. 393, left column, 7th reference: 'McMurry LM, Oethinger, M, Levy SB (1988)' should be 'McMurry LM, Oethinger M, Levy SB (1988)'

Table 1. Effect of cerulenin on fatty acid compositions of DHA-producing *M. marina* strain MP-1 at 10 °C.

Fatty acid	Cerulenin (μg ml ⁻¹)				
	0	0.1	0.5	1	2
12:0	1 ^a	1.7	4.6	6.1	6.7
14:0	10.3	15.9	23.8	26.9	32.5
14:1	2.1	4.6	6.4	7.7	9.8
16:0	12.2	11.3	12.1	11.3	14.1
16:1	58.5	52	28	22	17.2
18:0	— ^b	0.1	0.2	0.3	0.4
18:1	1.7	1	0.3	0.2	0.1
22:6	5.9	8	19.2	19.4	14.8
Others	8.3	5.5	5.9	6.6	4.9

^aValues are means of three samples.

^bBelow the limit of detection.
