Due to an unfortunate oversight the odds ratios and *p*-values for some genotypes were calculated the wrong way around. The right values are tabulated as follows.

	Genotype	Odds ratio (95%CI)	<i>p</i> -Value
Total women	M1 (T/C)	1.05 (0.57–1.90)	0.989
	M1 (C/C)	0.76 (0.27–2.09)	0.723
	M2 (A/G)	0.53 (0.28–1.00)	0.052
	M4 (C/A)	1.32 (0.71–2.45)	0.435
	M4 (A/A)	4.96 (0.47–246.91)	0.179
Total premenopausal women	M1 (T/C)	1.00 (0.41–2.46)	0.834
	M1 (C/C)	0.62 (0.10–2.86)	0.738
	M2 (A/G)	0.98 (0.40–2.41)	0.865
	M4 (C/A)	1.02 (0.37–2.77)	0.850
	M4 (A/A)	4.54 (0.22–272.17)	0.236
Total postmenopausal women	M1 (T/C)	1.66 (0.62–4.50)	0.373
	M1 (C/C)	1.28 (0.24–8.65)	1.000
	M2 (A/G)	0.32 (0.12–0.89)	0.025
	M4 (C/A)	1.22 (0.48–3.13)	0.809
