We would like to take this opportunity to thank Professor Daniel Hayes for his wonderful service and leadership as an Associate Editor of Breast Cancer Research and Treatment. Our journal averages around five submissions a day 365 days a year and Dan has ably overseen many of the clinical manuscripts submitted. Not only has he done this with timeliness, sympathy, and wonderful judgment, but in addition has led substantial improvement in policy and guidelines for articles on prognostic variables and other areas.

With Dan's remarkable efforts, the impact factor of the journal has risen substantially and we commonly receive

among the most critical clinical trials results in breast cancer. We deeply appreciate his dedication and effort.

I am very pleased to announce that Professor Stefan Gluck, University of Miami Miller School of Medicine, has accepted our proposal to replace Dan as Associate Editor. Stefan brings many of the same skills to our board plus a wide ranging experience in other areas of malignancy which will serve us well.

We are still seeking to fill one additional Associate Editor position, with a focus on imaging technologies.

We would appreciate hearing from our readership concerning suitable candidates for this important role.
