The author regret for an error occurred in Fig. 1 of this article published in volume 18, number 3, June 2009. In the denominator of equation w_i^t , the sign of y_i should be positive instead of negative. The corrected figure is given below.

$$\begin{aligned}
 &F_0(x) \equiv 0 \\
 &\text{for } t = 1 \dots T \\
 &\quad w_i^t = \frac{1}{1 + e^{y_i F_{t-1}(x_i)}} \\
 &\quad \text{Get } h_t \text{ from weak learner} \\
 &\quad \alpha_t = \frac{1}{2} \ln \left(\frac{\sum_{i: h_t(x_i)=1, y_i=1} w_i^t}{\sum_{i: h_t(x_i)=1, y_i=-1} w_i^t} \right) \\
 &\quad F_{t+1} = F_t + \alpha_t h_t
 \end{aligned}$$

Fig. 1 The Logitboost algorithm (Friedman et al. 2000). y_i is the binary label to be predicted, x_i corresponds to the features of an instance i , w_i^t is the weight of instance i at time t , h_t and $F_t(x)$ are the prediction rule and the prediction score at time t , respectively
