Erratum to: Dig Dis Sci DOI 10.1007/s10620-008-0514-5

The following errors were published in this article.

In the upper left corner of Fig. 2c, the expression $P < 0.001$ should be $P = 0.001$.

At the bottom of Figs. 2 and 3, the labels A, B, and C should be lowercase.

The labels (b) and (c) in the third sentence in the Figure 3 caption should be switched so that the sentence reads: CRP level (c) was more highly correlated with disease activity ($r = 0.811$) than was ESR (b) ($r = 0.585$).

Fig. 2 Correlation analysis of disease activity in ulcerative colitis. Soluble TREM-1 level (**a**) was more highly correlated with disease activity ($r = 0.849$) than was ESR (**b**) ($r = 0.619$) or CRP (**c**) ($r = 0.546$). The top and the bottom of each box are the 75th and 25th

percentiles, respectively. The top and bottom of each bar are the 90th and 10th percentiles, respectively. Correlation between variables was assessed using Spearman's rank correlation

Fig. 3 Correlation analysis of disease activity in Crohn's disease. There was a trend toward lower soluble TREM-1 level (**a**) in those with remission compared with those without ($r = 0.380$), but this relationship did not reach statistical significance ($P = 0.081$). CRP level (**c**) was more highly correlated with disease activity ($r = 0.811$)

than was ESR (**b**) ($r = 0.585$). The top and the bottom of each box are the 75th and 25th percentiles, respectively. The top and the bottom of each bar are the 90th and 10th percentiles, respectively. Correlation between variables was assessed using Spearman's rank correlation
