This volume contains 23 journal refereed papers devoted to coding and cryptography. These papers are the full journal versions of a selection of the best extended abstracts accepted for presentation at the International Workshop on Coding and Cryptography (WCC 2009) held in Lofthus, Norway, May 10–15, 2009. Each of the extended abstracts originally submitted to the workshop were reviewed by at least two members of the Program Committee. As a result of this screening process, 40 were selected for presentation at the workshop together with five invited talks.

The authors of the presented papers were in turn invited to submit full versions of their papers to the DCC journal. Each of the full-version submissions were once again thoroughly examined and commented upon by at least two reviewers. This volume is the end result of this long process. We are grateful to the reviewers who contributed to guaranteeing the high standards of these papers. We would like to thank all the authors and all the other participants of the WCC for making it a highly enjoyable and stimulating event. September 2010 Sasha Kholosha, Pascale Charpin, Eirik Rosnes, Matthew G. Parker.
