Euphytica, Vol. 139, No. 2, pp. 167–172 (2004)

In this article there has been an unfortunate misrepresentation of a figure. It concerns an incorrect version of Figure 1 on page 170. The correct reproduction of this figure is published below:

Figure 1. DNA bands amplified from leaves of F₂-derived F₃ families of synthetic hexaploid-11 (susceptible parent, Sp) × ‘Halt’ (RWA resistant parent containing *Dn4*, Rp), using microsatellite *Xgwm337* marker and electrophoresed in a 7% polyacrylamide gel. L = 50 bp ladder, R: homozygous resistant, S: susceptible, H: heterozygous F₃ families (F₂ plants); about 110 F_{2,3} families were evaluated.
