¹ *Physics Department*, ² *Department of Materials Science & Engineering*, ³ *Department of Nuclear Engineering & Radiological Sciences*, ⁴ *Department of Mechanical Engineering and Applied Mechanics* all at the *University of Michigan, Ann Arbor, MI 48109, U.S.A.*

Published in *International Journal of Fracture* **119/120**: 441–448, 2003.

This paper is an identical publication of the article published in *Engineering Fracture Mechanics*, Vol. 61, 163–171 (1998). Owing to an error in the process this article was published again in *International Journal of Fracture* Vol. 119/120, 441–448 (2003). The Editor-in-Chief and the publisher regret this unfortunate turn of events. The publication in *Engineering Fracture Mechanics* is to be regarded as the initial one and therefore the only valid publication of the article. Citation to the republication in the *International Journal of Fracture* should be avoided at all times.
