Fig. 2 The plot captures the estimated difference in changes of costs and its 95 % confidence band from models 1 to 6 (in black) and the proposed model $\hat{\zeta}(t)$ (in gray) for (1) $G = 1$ (PDCM embedded model) versus $G = 3$ (HPDCM model) in the upper panel and (2) $G = 2$ (PDCM centralized model) versus $G = 3$ (HPDCM model) in the lower panel. The x-axis measures the time from the engagement in years and the y-axis represents the estimated difference in changes of costs
