Protective effect of pranlukast, a cysteinyl-leukotriene receptor 1 antagonist, on indomethacin-induced small intestinal damage in rats

H. Nishio, Y. Hayashi, S. Terashima and K. Takeuchi

Fig. 1 of this article is misprinted. It has to be replaced by the correct one

Fig. 1. Macroscopic observations of indomethacin-induced small intestinal lesions in rats. Animals were given indomethacin (10 mg/kg) s.c., and killed 24 hr later. Note that multiple hemorrhagic lesions occurred in the small intestine, mainly in jejunum and ileum.
