Erratum to: J Quant Criminol DOI 10.1007/s10940-010-9101-y

The interpretation of the interaction effect between self-reported prison and age (see Table 6) provided in the text is incorrect. The interaction reveals that *younger* inmates provide *more* accurate accounts of their past than older inmates. The text discussion of the practical significance of the effect is accurate—at all ages there is a strong relationship between self-reported prison and ODRC prison terms.
