This issue of HOSC is the first of two issues dedicated to Peter Landin's memory.

In "Peter Landin: a computer scientist who inspired a generation," Richard Bornat expands on the obituary he wrote for The Guardian, with more technical content.

In "Personal Recollections of Peter Landin: 1987–2009," Paul Boca shares his memories of Peter Landin as a teacher, as an adviser, and as an invited lecturer.

In "The Peter Landin Prize," Kevin Hammond and Greg Michaelson review the history of this yearly prize.

We then reprint a gem from the 1960s: Peter Landin's report "Getting Rid of Labels," which Bob Tennent kindly accepted to introduce.

We conclude this first special issue with another gem: a late set of lecture notes, "Calculations: A Hole In The Heart Of The Study Of Computing," typeset and introduced by Tony Clark.
