‘The Expected Impact of the Peace Conduit Project (The Red Sea – Dead Sea Pipeline) on the Dead Sea’ by Ittai Gavrieli, Amos Bein and Aharon Oren
Mitigation and Adaptation Strategies for Global Change 10: 3–22, 2005.

It has come to the attention of the Publishing Editor (GJJ), Editor-in-Chief (RKD) and Guest Editors (Jacques C.J. Nihoul, Nick Aladin and Michael H. Glantz) that a paper recently published in a special issue of *Mitigation and Adaptation Strategies for Global Change, Volume 10, No 1.*, Endangered Seas, Lakes and River Systems and Mitigation Strategies, contained factual errors that were not present in the authors’ original manuscript and were introduced in the manuscript during the editorial processing and beyond the authors’ control. A corrected version of this paper, The Expected Impact of the Peace Conduit Project (The Red Sea-Dead Sea Pipeline) by Ittai Gavrieli, Amos Bein and Aharon Oren, is published in this issue of our journal. While we strive to publish perfect manuscripts there are rare exceptions. We regret this episode and apologize to the authors and readers and thank you for your understanding in this matter.

At the very end of this issue we reproduce an updated revised version of the original article which should be treated as definitive by the reader.
