In our paper that was published online 21 June 2011 in Molecular Biology Reports (The effect of mutation at M307 in *FUT1* gene on susceptibility of *Escherichia coli* F18 and gene expression in Sutai piglets) there is an error in two primers we quoted for detection and quantification

of *FUT1* gene expression in various pig tissues by qPCR. In the section “Design and synthesis of the real-time PCR primer” the correct text should be “The length of the amplified *FUT1* fragment was 126 bp, with the forward primer being 5'-TTTTAAGCCCCCAAAGTGCC-3' and the reverse primer being 5'-TAAATCGACCCCATCAG CCTC-3'.”
