The original version of this manuscript unfortunately contained a mistake.

The scheme was implemented correctly, but there is an error as presented in Eq. 3. The correct notation is as follows:

$$T = \frac{\rho C_p D g_c}{\lambda \gamma} K$$

where ρ is density of air (kg m^{-3}), C_p specific heat of air, γ psychrometric constant, D vapour pressure deficit (kPa), λ latent heat of vaporisation, g_c canopy conductance that was obtained as the product of LAI and g_s or g_{sm} , and K duration under consideration, which is daylight hours in seconds for the daily, or 3600 s for hourly, time scales.

The article was published in Volume 305.

The online version of the original article can be found under doi:10.1007/s11104-007-9287-4.
