1 Erratum to: Tribol Lett DOI 10.1007/s11249-009-9408-8

The fourth page, second paragraph of the original article includes some textual errors. The corrected text is as follows:

Figure 5 shows the wear track and counterbody profiles for blank Ti6Al4V (a) and DLC coatings (b) after wear and

tribocorrosion tests. The wear volume at dry conditions for the bare alloy was about $1.35 \times 10^{-9} \text{ m}^3$ while in tribo-corrosion tests, the wear volume was $1.8 \times 10^{-9} \text{ m}^3$ due the simultaneous action of corrosion and wear. As can be seen in Figure 5 (a), the presence of PBS solution changes the profile of wear track mainly on the bare alloy, when it becomes deeper and narrower than that from wear tests in air.

The online version of the original article can be found under doi:[10.1007/s11249-009-9408-8](https://doi.org/10.1007/s11249-009-9408-8).
