Erratum to: Metabolomics (2017) 13:81 DOI 10.1007/s11306-017-1214-y

The original version of article unfortunately contained mistakes. The top portion of Fig. 1 had overlapping text and the second author name was spelled incorrectly. These mistakes are now corrected through this erratum.

The online version of the original article can be found under

Fig. 1 The Lipid network method. **a** Input list of lipids with OPLS-DA model scores. **b** Depicts the web server that contains scripts and the lipidomic network, in which node colours *green*, *dark blue*, *orange*, *red* and *white* respectively correspond to glycerophospholipids, sphingolipids, diglycerides, enzymes and specific reactions. **c** Derived subset of lipid metabolism linking the input perturbed metabolites; metabolite, reaction and enzyme nodes are respectively represented by *rectangles*, *triangles* and *ellipses*; input metabolite

nodes are respectively coloured a *brighter shade* or *green* or *red* depending on the extent to which their levels have been elevated or decreased, or *blue* if they correspond to nodes introduced during the subset retrieval; the borders of enzyme nodes are *shaded blue* or *red* respectively to depict the extent of positive or negative Relative Importance Score (the sign corresponding to the increase or decrease in enzyme activity). **d** The list of retrieved enzymes ranked by Relative Importance
