“Values are expressed as mean±SEM and referred to total brain metabolism (100%)” was inadvertently included in the caption to Figure 2.

The caption to Figure 2 should read:

Fig. 2. Interaction plots showing relative metabolism for the dorsal striatum of males (a) and the septal nuclei for females (b). Interactive effects between chronic periadolescent cannabinoid/vehicle exposure and adult cocaine or saline administration are shown.

The authors regret the error.
