

ERRATUM

In Figure 2 of Sport Sci Health (2005):81–90, mean plasma glucose concentrations relative to *heavy* and *absent* Physical Activity (PA) levels were inverted. In the actual figure, the glycaemic values are respectively lower for *heavy* and higher for *absent* PA subgroups.

The online version of the original article can be found at <http://dx.doi.org/10.1007/s11332-2005-004-0015-2>

The correct figure and legend are the following:

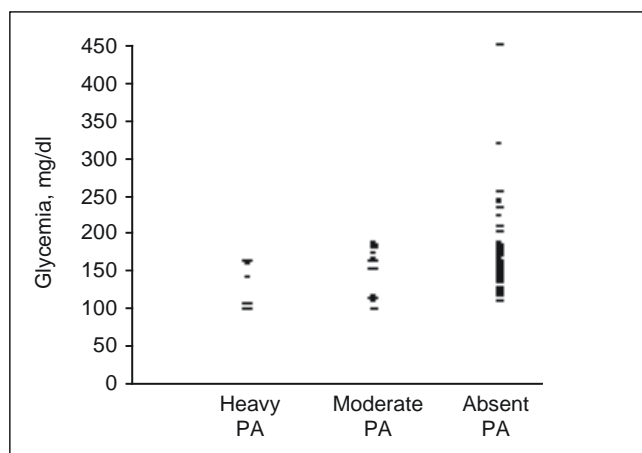

Fig. 2 Distribution of single glycaemic values in the physical activity (PA) subgroups of the HIV-diabetic group. An inverse tendency is noted between intensity levels of PA and average plasma glucose concentration
