Antibiotics used are: chloramphenicol (Cm), gentamycin (Gen), rifampicin (Rif), carbenicillin (Carb), kanamycin (Kan) and tetracycline (Tet)

^a R: Resistant; S Sensitive, I: Intermediate, values of the diameter (mm) according to the standards established by the Committee on Antimicrobial susceptibility of the French Society for Microbiology (CA-SFM). These data correspond to the mean values obtained on 3 replicates

^b Minimum inhibitory concentration (MIC) was measured after 72 h of growth

^c A chloramphenicol resistance gene was carried by the pCNS plasmid

^d No inhibition at all, diameter of the disk is 7 mm
