Following publication of the manuscript by AR Ibele, FP Bendewald, SG Mattar, and DT McKenna entitled “Incidence of Gastrojejunostomy Stricture in Laparoscopic Roux-en-Y Gastric Bypass Using an Autologous Fibrin Sealant” published in *Obesity Surgery* 2014, Jul 24(7): 1052–6, the authors noted a typographical error in the abstract and percentages calculated in Table 2 of the article.

The abstract should state that “Of patients who received sealant, 1.6 % needed postoperative blood transfusion compared to 4.8 % of those who did not receive sealant ($p=0.05$).”

The corrected percentages in Table 2 are below. The outcomes of the study and their statistical significance were not affected by these errors in the manuscript, and the conclusions of the manuscript are the same and remain valid.

	No fibrin sealant applied to gastrojejunostomy ($n=104$) (%)	Fibrin sealant applied to gastrojejunostomy ($n=425$) (%)	<i>p</i> value
Postoperative bleeding requiring transfusion	5/104 (4.8)	7/425 (1.6)	0.05
Anastomotic leak	2/104 (1.9)	4/425 (0.9)	0.2
Anastomotic stricture	5/104 (4.8)	48/425 (11.3)	0.04
