Unfortunately, there were errors in Table 1 of this article. In column 2, in place of two # symbols, the numbers “10” and “11”, respectively, should be shown. The corrected table is given below.

Table 1 Patients' characteristics

Number of patients	31
Observation period (months)	
Median (range)	17 (2–168)
Age (years)	
Average $\pm$ SD	45 $\pm$ 18
Median (range)	44 (2–75)
Male/female	15/16
Location ^{a,b}	
Right/middle/left	14/1/15
Bounding bone (T/Rib)	26/4
T level of proximal tumor	
Including T1	8
T2–T4	8
T5–T12	10
Size ^{a,b} (mm)	
Average $\pm$ SD	39 $\pm$ 23
Median (range)	36 (10–100)
Surgical approach	
Open	11
VATS (complete resection/enucleation)	12/2
H-VATS	6
Pathological diagnosis ^b	
Schwannoma/neurofibroma/ganglioneuroma	26/3/3
Recurrence	1

SD standard deviation, *T* thoracic vertebra, *VATS* video-assisted thoracic surgery, *H-VATS* hybrid video-assisted thoracic surgery

^a Excluding 2 cases with multiple tumors

^b Including a case having one schwannoma and one neurofibroma
