There is a mistake on p. 295, left column under “Mandibular advancement devices.” The first entry should read correctly:

- MADs may be an alternative to positive airway pressure therapy in patients with mild to moderate OSA (AHI ≤ 30/h). This is particularly relevant for patients with a body mass

index (BMI) <30 kg/m<sup>2</sup> and position-dependent OSA (A).  
Please excuse this inconvenience.
