Dear Editor:

We thank the response of Dr. Chen et al. to our review article “Keratin expression in endocrine organs and their neoplasms” published in your Journal (2009, 20:1–10). Dr. Chen et al. correctly pointed out that Becton-Dickinson’s mouse monoclonal antibody clone CAM 5.2 is actually against Moll’s peptides #7 and #8, which correspond to 48- and 52-kilodalton (kd) peptides, respectively. The current B-D CAM 5.2 datasheet made the correction: “previous revisions

of this data sheet claimed reactivity with Moll’s peptides #8 and #18. The application of more definitive technology clarifies and corrects previous specificity claims”..

Sincerely,

Peiguo G. Chu, M.D., Ph.D.
Sean K. Lau, M.D.
Lawrence M. Weiss, M.D.
