To The Editor

We noted a surprising and uncanny resemblance of the Computed Tomography (CT) finding in a 65 year old lady with carcinoma breast and a massive Pericardial

Effusion (PE) (Fig. 1a) and a 1 month old child with a loculated PE (Fig. 1b) to a Spiderman mask (Fig. 2). We suggest that this finding be labeled as the “Spiderman Mask Sign”.

Fig. 1 CT of a massive pericardial effusion (PE) (a) in the 65 year old female and a 1 month old child with a loculated PE (b)
