Erratum to: Indian J Pediatr (January 2015) 82(1):71–79 DOI:10.1007/s12098-014-1585-2

The original version of the article inadvertently contained a mistake. There is a slight miscalculation in the way the data is presented and hence Fig. 5 and text on pg. 5 would change. The revised Fig. 5, its revised legend and revised paragraph are provided below.

Fig. 5 Severe retinopathy of prematurity (Stage 3–5) in infants 400–1500 g who had a retinal exam.

Original (from page 5, second to last paragraph on the page):
From 2003 to 2013, a striking decrease in severe ROP (stage 3,4,5, or surgically treated) was seen in the Pediatrix Network. In infants with birth weights of 400–1,500 g, severe ROP dropped from 12 % in 2000 to 2.4 % in 2013 (Fig. 5). Given the fact that Pediatrix Medical Group admits approximately 20,000–25,000 extremely low birth weight (ELBW) and very low birth weight (VLBW) infants annually, the reduction in rates of severe ROP, the leading cause of childhood blindness, represents an important public health initiative, well documented in the Data Warehouse.

It should read as:

From 2003 to 2013, a striking decrease in severe ROP (Stage 3–5) was seen in the Pediatrix Network. In infants with birth weights of 400–1,500 g, severe ROP dropped from 13.4 % in 2000 to 4.7 % in 2013 in infants with a retinal exam (Fig. 5). Given the fact that Pediatrix Medical Group admits approximately 10,000 very low birth weight (VLBW) infants annually, the reduction in rates of severe ROP, the leading cause of childhood blindness, represents an important public health initiative, well documented in the Data Warehouse.
