**Abstract** This research note explores the rationale for consistently submitting scholarly manuscripts to and publishing in *American Journal of Criminal Justice*. By means of structured interviews with nine of the most frequently published authors throughout the history of the journal, this research identifies that *AJ CJ*'s manuscript review process and its readership are the most common themes regarding motivations for consistently selecting the journal. Specifically, data reveals that these authors believe that timely responses to submissions, high-quality feedback, helpful editors, increased audience exposure, and received feedback from readers make *AJ CJ* an attractive and viable outlet for their research articles.

**Keywords** *AJ CJ* · Academic publishing · Frequently published authors

## Introduction

Recent years have seen criminology and criminal justice (CCJ) scholars focus attention on not only the theoretical and topical foci of their discipline, but also on the ways in which they produce their scholarship and contribute to the accumulation of knowledge about crime and justice. In a reflexive manner, scholars have turned inward on the discipline, examining research productivity rates of scholars and identifying highly productive scholars (Rice, Cohn, & Farrington, 2005; Rice, Terry, Miller, & Ackerman, 2007; Shutt & Barnes, 2008; Worley, 2011) and major grant funding recipients (Mustaine & Tewksbury, 2009). Major and productive works in the discipline (Reisig, 2001; Vito & Tewksbury, 2008) and studies that are most

commonly included in texts and educational materials (Wright, 2002; Wright, Malia, & Johnson, 1999; Wright & Miller, 1999; Wright & Sheridan, 1997) have also been highlighted. This inward look has spawned special issues of highly regarded journals in the discipline (cf. *Journal of Criminal Justice Education*, volume 22, no. 1, 2011). Accompanying this reflexive examination of the discipline, several attempts by scholars to identify publication outlets that are the most influential on the discipline (Jennings, Higgins, & Khey, 2009; Sorenson, 2009) and those considered by scholars as the most important (Sorenson, Snell, & Rodriguez, 2006) have been undertaken. Others have focused on trends in methodological orientations (Copes, Brown, & Tewksbury, 2011; DiChristina, 1997; Kleck, Tark, & Bellows, 2006; Tewksbury, Dabney, & Copes, 2010; Tewksbury, DeMichele, & Miller, 2005) and topical foci for articles published both in the discipline as a whole and in specific journals (Tewksbury & Mustaine, 2001).

However, while CCJ scholars have focused their attention on what is produced and where and by whom in the discipline, little attention has been devoted to understanding the process by which research is brought to publication. Although there are a few autobiographical reflections on individual careers (Pogrebin, 2010), assessments of the manuscript review process (Mustaine & Tewksbury, 2008; Tewksbury & Mustaine, *in press*), and evaluations of the number and composition of author teams for published articles (Tewksbury & Mustaine, 2011), there remains no systematic examination of how and why CCJ scholars seek to publish their work in particular outlets. Surely considerations of prestige (as measured by characteristics such as a journal's impact factor or informal ranking in the eyes of one's peers) are important, as may be placing one's work in outlets where it is most likely to be read by one's target audience. However, such attitudes and beliefs are based largely on anecdotal evidence and lack systematically gathered support.

The purpose of the present paper is to examine how and why the authors who have most frequently published in the *American Journal of Criminal Justice (AJCJ)* make the decision to place their work in this journal. The *AJCJ*, which has recently been examined for topical content and had its growth and development charted for its more than 35-year history (Miller, Tewksbury, & Worley, 2012), is the official publication of the Southern Criminal Justice Association, one of the five regional criminal justice scholarly associations in the United States. The *AJCJ* is the oldest of the regionally sponsored/published journals, and, at least anecdotally, it is the most widely recognized and highest-ranked by discipline scholars. Based on this foundation, the present study explores the reasoning for consistent publication in the journal among nine of the most frequently published authors throughout the history of the journal, as identified by Miller et al. (2012).

## Methodology

All data for the present analysis come from structured interviews conducted with nine individuals identified as the most frequently published authors in the *American Journal of Criminal Justice*. Based on Miller et al.'s (2012) review of the first 35 volumes of the journal, twelve authors were identified as having published five or more articles in the journal. The individuals who distinguished themselves from all other authors as

the “high rate publishers” were: Richard Tewksbury (12 publications in *AJ CJ*), Eric Lambert (10), Gennaro Vito (8), Elizabeth Mustaine (7), G. Larry Mays (7), George Higgins (6), David Giacomassi (6), Francis Cullen (6), Nancy Hogan (6), J. Mitchell Miller (5), Reed Adams (5) and Matt DeLisi (5). The above scholars published articles which appeared in the *American Journal of Criminal Justice* between 1975 through the first issue of 2010. For the purposes of this paper, only articles that were published within this timeframe were counted toward a respondent’s total number of publications in the *AJ CJ*.

Once identified as the high rate publishers in *AJ CJ*, each of the above authors (with the exception of Richard Tewksbury), was invited via e-mail to participate in a structured, telephone interview. Nine of these authors agreed, and interviews were completed within 2 weeks of initial correspondence. All interviews were conducted by the same interviewer and followed a structured interview guide.

Each interview was transcribed verbatim. Data were coded following principles of analytic induction in multiple readings (Charmaz, 1983, 2006). Each reading of the transcripts focused on a narrow range of issues and conceptual categories concerning authors’ rationale for consistently selecting the *AJ CJ* as an outlet for publication. As these high rate publishers have been previously identified (Miller et al., 2012), all quotes presented in this paper are attributed to their speakers using the authors’ real names.

## Findings

All of the interviewed authors believed that the *American Journal of Criminal Justice* was an excellent outlet to which they could submit their scholarly research. Two of the respondents, George Higgins and Gennaro Vito, had also served as Editor of the *AJ CJ*. In fact, Vito, who served as Editor of *AJ CJ* from 1987 to 1991, expressed a particularly strong fondness for *AJ CJ*. He made the following statement:

I’ve seen the journal come up from rather modest beginnings to the point where it now has a publisher full-time and will go quarterly. In the beginning, it was two issues and we all worked hard to keep it alive. And now it’s really kind of made the big time.

While most of the respondents expressed their admiration for the *AJ CJ*, interview data yielded two primary sets of findings that explained motivations for consistently selecting the journal for their work. These focused on the journal’s manuscript review process and its readership.

The manuscript review process was the most commonly reported motivation for repeatedly selecting the *AJ CJ* as an outlet for publishing scholarly research. When compared to other scholarly journals, most authors believed the quality of the manuscript review process at *AJ CJ* was exemplary. According to Francis Cullen, author of six articles published between 1989 and 2005 in the *AJ CJ*, “The quality of the review process makes a big difference when people submit their work.” Specifically, these authors believed that timely responses to submissions, high-quality feedback, and helpful editors made *AJ CJ* both an attractive and viable outlet for their research articles. For example, Elizabeth Mustaine, a recent Past President of the Southern

Criminal Justice Association, explained, “The turnaround time is good. It doesn’t take very long to get word back about the status of your manuscript.”

A near-universal factor related to the manuscript review process that positively influenced authors’ perceptions of *AJ CJ* as an attractive outlet for their scholarly work concerned timely responses to their submissions. Nearly all of the authors believed that scholarly journals that provided a response on the status of their submission within a reasonable time period were the most attractive outlets. As Francis Cullen elaborated, “If I sent something to a journal, and I don’t hear anything for 8 months, then I would be unlikely to go back to that journal.” Among these authors, the *AJ CJ* was regarded as consistently providing a decision about a manuscript within a reasonable period of time. Eric Lambert, author of 10 articles published between 1999 and 2010 in the *AJ CJ*, suggested that “within about 90 to 100 days, [the *AJ CJ*] will have something back to you or sooner, and you can’t say that about a lot of journals.” It was clear that these authors appreciated reasonable turnaround from journals in regards to their submissions, and *AJ CJ* was seen as effectively providing this turnaround.

Another common theme associated with the manuscript review process that positively influenced authors’ perceptions of *AJ CJ* as an attractive outlet for their scholarly work focused on the quality of feedback that was provided. Most authors articulated that high-quality feedback was consistently made available to scholars who submitted their work to *AJ CJ*. They believed that the journal actively obtained qualified reviewers that were interested in reading submitted manuscripts and willing to provide constructive criticism. Eric Lambert explained this when he said, “This journal selects good reviewers that actually provide you with good reviews to help you improve your paper.” Others felt that the *AJ CJ*’s staff members consistently attempted to assist in improving submitted manuscripts. “The editorial board,” stated Nancy Hogan, “was always very helpful with their comments.” Upon submitting their work to the *AJ CJ*, authors reported being highly confident that they would receive meaningful comments that would enhance their manuscript. This certainty motivated them to continue selecting *AJ CJ* for their research articles.

In addition, the presence of helpful editors throughout the *AJ CJ*’s history was expressed as a factor that was influential in many authors’ repeated decisions to submit manuscripts to the journal. Like most of these authors, Eric Lambert recalled, “The *AJ CJ* has always had excellent editors.” Unlike those of other journals, however, editors of the *AJ CJ* were often seen as teachers, guiding authors through the publishing process. Numerous authors described these editors as gregarious individuals providing assistance in manuscript preparation and offering critical advice about improving manuscripts. A few authors also mentioned certain editors throughout the history of the *AJ CJ* who facilitated positive submission experiences. For instance, both Matt DeLisi and Eric Lambert recalled that Bill Doerner was a “helpful” editor. “I liked how Doerner worked with authors and encouraged us,” stated Matt DeLisi, “and so I kept going back to the journal.” Without a doubt, many of these authors believed that the editors of *AJ CJ* were beneficial to their early publishing experiences, and this consequently motivated them to consistently publish in the journal.

The second commonly reported motivation for repeatedly selecting *AJ CJ* as an outlet for publishing scholarly research concerned the journal’s readership. Most

authors stated a preference for scholarly journals that carried a large readership, and *AJCJ* was recognized among these authors as having a sizable number of readers, which helped to promote frequent submissions to the journal. Specifically, as it relates to a large readership, these authors believed that increased exposure and received feedback from readers made *AJCJ* both an attractive and viable outlet for their research articles.

A near-universal factor related to large readership that positively influenced authors' perceptions of *AJCJ* as an attractive outlet for their scholarly work concerned increased exposure to their research. Many authors believed that in spite of writing a valuable research article, where the document was published was pertinent to it being seen and utilized. "My first preference in a journal," stated Francis Cullen, "would be one that gives everybody in the field a chance to look at what I've written." Among these authors, *AJCJ* was recognized as a scholarly journal that allowed such significant exposure. As stated simply by George Higgins, "I know it's one that people will read."

Most authors reported that they believed articles published in *AJCJ* would be viewed by a large readership because of its relationship to the Southern Criminal Justice Association. These authors acknowledged that each member of the Association would receive a hard copy edition of the *AJCJ*, which guaranteed a considerably large audience. The fact that the *AJCJ* was delivered to members of the Southern Criminal Justice Association was often a motivation for publishing in it. "That's a big factor with the *AJCJ*, because the journal goes to all the members of the Southern Criminal Justice Association, which therefore makes it ensured that a certain number of people are going to have access to your work," stated Francis Cullen. These authors felt that *AJCJ*'s connection to the regional criminal justice organization allowed increased visibility and made it more enticing.

After publishing in the *AJCJ*, a significant minority of authors reported receiving feedback from readers about their published studies. In the words of Nancy Hogan, "I've got several e-mails from people that either asked questions or wanted a follow-up." Such feedback was often explained as an inevitable result of the substantial readership of the journal, and it was cited as a driving force behind continuing to publish in *AJCJ*. J. Mitchell Miller, another recent Past President of the Southern Criminal Justice Association, conveyed a similar sentiment toward the journal and also provided a vision of how the *AJCJ* could continue on its path toward success. Miller expressed himself in the following way:

A really good model to follow and aspiration for the *American Journal of Criminal Justice* would be to look to the history and success of *Social Forces*. *Social Forces* is the sociological counterpart to the *American Journal*. It's the official publication of the Southern Sociological Society. And we're the regional equivalent in criminal justice, but whereas the *American Journal* has remained sort of a regional level in reputation and status, *Social Forces*, even though it's owned by the regional association, is considered a tier one journal. And I think that would certainly be something wonderful that could happen to the *American Journal* is that it could continue to improve and certainly the example of *Social Forces* shows that substantial improvement and this prestige realization is possible for a regional journal.

## Conclusion

The purpose of this study was to explore the rationale for consistently submitting scholarly manuscripts to and publishing in *American Journal of Criminal Justice*. By means of structured interviews with nine of the most frequently published authors throughout the history of the journal, this research identified that *AJ CJ*'s manuscript review process and its readership were the most common themes regarding motivations for consistently selecting the journal for their work. Specifically, data revealed that these authors believed that timely responses to submissions, high-quality feedback, helpful editors, increased audience exposure, and received feedback from readers made *AJ CJ* an attractive and viable outlet for their research articles.

As the *AJ CJ* looks toward the future, it should continue to provide authors with an efficient and dynamic manuscript review process, in order to encourage more and subsequent submissions that keep the journal competitive and inform our existing criminal justice knowledge base. For the same reasons, *AJ CJ* should also maintain its ability to provide authors with a large readership. Ultimately, these efforts will allow *AJ CJ* to persist in the discipline as an attractive outlet for cutting-edge criminal justice research from the leaders in our field.
