Launching of a New Journal from China – P. Krishnamurthy (Email: gsocind@gmail.com)

A new, quarterly Journal ‘Geoscience Frontiers’ (GSF) in English has been launched from October 2010 by the China University of Geosciences (Beijing), Peking University with production and hosting by Elsevier. The aim and scope of the GSF include ‘publication of original articles and high quality reviews of recent advances in all fields of Earth Sciences. The inaugural

issue edited by Li Cheng and Lily Wang contains 13 papers which mainly cover structure, metamorphism, magmatism and mineralisation aspects (the journal is available in the library of the Geological Society of India for reference)

GSF has a pleasing format and style and perhaps represent the first English language publication in Earth Sciences from China

providing a platform for geoscientists of the world.

GSF is a welcome addition to the list of Earth science journals, that has a holistic approach unlike specialized journals. The email address of the editorial office is geofrontier@cugb.edu.cn and online submission of MS to GSF should be through <http://ees.elsevier.com/gsf>.
