Since its inception in 2003, the RIVF conference—Research, Innovation, and Vision for the Future—has become a major international scientific event in the field of Computing, Communication and Information Technologies. The IEEE-RIVF 2010 was the 8th in the series and hosted by Hanoi University of Science (Vietnam National University, Hanoi) and the Institute of Information Technology (Vietnam Academy of Science and Technology), during November 1–4, 2010. It was sponsored by the IEEE Vietnam Section, in co-operation with IEEE Region 10, and technically co-sponsored by the IEEE Communications Society and IEEE Computational Intelligence Society.

This special issue comprises six of the best papers from IEEE-RIVF 2010. After the conference, based on the comments of the reviewers in the Program Committee, nine papers from the Computational Intelligence and the Information and Knowledge Management Tracks were identified and considered as candidates for the special issue. The authors of the papers were invited to submit extended and revised versions of their papers. Each paper then went through another peer-review process of two rounds. Finally, six papers were accepted for publication in this journal.

The editors would like to thank all the authors for submitting their papers and the reviewers for their insightful and constructive comments. Special thanks go to this journal editor-in-chief, Prof. Vincenzo Loia, for his helpful guidance and support along the way making this special issue.
