Erratum to: Mindfulness
DOI 10.1007/s12671-013-0204-z

In the original version of the article, there are three errors. First, the description of the association between self-concealment and internalizing problems in Abstract should be “High levels of self-concealment predicted higher levels of depression and anxiety above the effects of mindfulness, age, and ethnicity for both men and women, and high levels of self-concealment predicted higher levels of somatization for women”. Second, the description of associations among mindfulness, self-concealment, and internalizing problems in the second paragraph on page 5 (i.e., third paragraph in

Result) should be, “These models support the hypothesis that lower levels of mindfulness and higher levels of self-concealment predict significantly higher levels of depression and anxiety for both sexes and higher levels of somatization for women above the effects of each other and the covariates. Finally, the description of the association between self-concealment and internalizing problems in the first paragraph on page 6 (i.e., first paragraph in Discussion) should be, “Also as expected, high levels of self-concealment predicted high levels of depression and anxiety above the effects of mindfulness, age, and ethnicity for both men and women, and high levels of self-concealment predicted higher levels of somatization for women”.
