Erratum to: J. Neurovirol
DOI 10.1007/s13365-017-0524-1

In the section “Statistical analyses”

Third indented paragraph line 3

[...] neurocognitively normal (NR normal; $N = 36$) [...] and not 26 as reported.

Corrections for Fig. 1

The MD data for the HIV- and HIV+ data were erroneously inverted.

The CG (Cingulum) effect size was incorrect: it is -.13 rather than -.07.

A new Fig. 1 appears below. These corrections do not affect any of the reported analyses and results because they are typographical and illustration errors.
