Following a long standing tradition, the Bollettino dell'Unione Matematica Italiana publishes articles arising from expanded versions of the invited talks at the Congress of the Unione Matematica Italiana. In this issue part of such contributions, relative to the Congress held in Siena, September 7–12 2015, are collected. They cover various branches of mathematics, are partly expository, but also contain new, original results. As customary, all papers underwent a rigorous refereeing process. We warmly thank the Authors for their cooperation.
