Abstract. The article explores how social network sites (SNSs) are used in travel and tourism. Another objective is to find out and summarize whether or not SNSs are beneficial for the travel and tourism industry. This study was based on literature review that was employed to determine the most popular SNSs in travel and tourism. Then, selected widely used SNSs were compared and evaluated. The advent of Web 2.0 brought about significant changes in tourism. There are currently a lot of platforms that can be utilized in travel and tourism for various purposes. Some of these platforms focus on providing solely travel related content. However, the most popular SNSs used in tourism are still Facebook and Twitter, which do not specialize in tourism. The findings suggest that the tourism related SNSs provide their users predominantly with travel information and/or facilitate contacts. Advantages include an easy access to various content twenty four hours seven days a week regardless the time zone. Among their drawbacks belong a lack of lower control over content and difficulties with sorting the valuable from the worthless among loads of various platforms and messages.

Keywords: Travel and tourism · Advantages · Drawbacks
Social network · Sites

1 Introduction

Social network sites (SNSs) are becoming an inseparable part of people's everyday activities, both for business and private purposes. There are now many definitions of SNSs. One of the most cited is provided by Boyd & Ellison [1] who define social network sites as follows: SNSs are web-based services that allow individuals to construct a public or semi-public profile within a bounded system; articulate a list of other users with whom they share a connection; and view and traverse their list of connections and those by other within the system. They also put the main emphasis on their social aspect since these social network sites enable users to articulate and make visible their social networks (cf. [2]).

SNSs are now on their rise. The most popular social network site is undoubtedly Facebook, followed by Twitter. Since SNSs penetrate in all human activities, they also play a considerable role in travel and tourism business, which is closely connected with the new information and communication technologies. In fact, Werthner & Ricci [3] claim that

travel and tourism industry is at the head of the Internet use and online transactions. In travel and tourism industry SNSs are part of other social media platforms such as blogs, forums, wikis, video and photo sharing, virtual communities, chat rooms and podcasts (cf. [4]).

For example, Lange-Faria & Elliot [5] state that travellers use SNSs in order to plan their trips and holidays. SNSs are important in their information search about the place, its attractiveness or accommodation possibilities. All this information is influenced by age, gender, culture and other demographic and sociographic features. In addition, travel and tourism industry is based on the use of word-of-mouth recommendations and SNSs such as Facebook or Twitter enable their users to share their travel experiences. As Nielsen's report [6] presents, 84% of consumers trust these recommendations. Furthermore, Bennett [7] states that 64% of non-US travellers use social networks while travelling, 85% of leisure travellers use their smartphone abroad and 30% of them have already used mobile applications to find hotel deals. In addition, 52% of Facebook users have been inspired in their holiday planning by their friends' photos or 76% of travellers have posted their holiday photos to a social network site. Overall, SNSs enable travellers to have more control over their travel decision making process (cf. [8]).

Therefore, the purpose of this article is to explore those social network sites that are most frequently used in travel and tourism and discuss and summarize their benefits and limitations for the travel and tourism industry.

2 Materials and Methods

Firstly, a method of literature search of available sources exploring the issue of social network sites in the field of travel and tourism was applied. A search was conducted in the world's acknowledged databases such as Web of Science, Scopus, Springer and ScienceDirect. Furthermore, other sources cited in the analysed studies were also examined. Secondly, on the basis of evaluation of these literature sources, the researched issue was explored. The research studies were classified according to their relevancy.

Although there are not many research studies on the issue of SNSs in travel and tourism, there is a noticeable increase in the number of these publications (Fig. 1).

Fig. 1. A number of publications on SNSs in travel and tourism (authors' own processing, based on the data from [9])

3 Social Network Sites and Their Use in Tourism

The existence of SNS is enabled by the fact that ordinary people could start to use the Internet and it has become the mainstream and therefore truly social. It coincides with Web 2.0, the second generation of web-based services, which enables large-scale sharing. According to [10], the SNS take-off point can be identified between February 2005 and August 2006. It was important that the Internet has enabled anyone not only to access information, but also to communicate with other people, become a member of online communities, and to create and share content of various kinds. Web 2.0 is not only social and extremely dynamic, but also hard to understand. As Ali & Frew [11] maintain, it is impossible to make an exact taxonomy of Web 2.0 tools and applications.

According to the website Tourism Boost [12], there are a few monitoring services specializing in social media like Hootsuite [13], which enables its customers to manage up to a hundred social networks, or Sprout Social [14]. These monitoring services can gather messages for their customers, usually businesses, from multiple channels in one place and thus enable these businesses to communicate freely with their customers, understand the customers' feelings about the brand, and instantly react if necessary to any negative trends among any particular group of customers. These services can also monitor conversations happening elsewhere on the Internet, including blogs, forums, and other public sites, social networks and platforms.

Most SNSs are used by both individuals and businesses in order to network and then stay in touch with other people and/or customers, and to gather a wide variety of information about them. SNS usually allow their users to exchange messages both publicly and privately, form groups, create public pages as well as events, share and tag photographs, audio and video, and much more. According to [10], as of January 2014, 74% of online adult Americans use social networking sites, whereas as of February 2005 it was only 9% of all American internet users. The same source [10] provides information on most popular SNSs among Americans as of September 2014: 71% of online adults use Facebook; 23% of online adults use Twitter; 26% use Instagram; 28% use Pinterest; 28% use LinkedIn.

Ali & Frew [11] made a list of most popular Web 2.0 sites, topped by Facebook and YouTube [15], both with 800 million users, followed by Qzone (480 million), Twitter (300 million), Renden (160 million), LinkedIn (120 million), Vkontakte, currently called VK (111 million) and others. The same list [11] also features several sites aiming at travel and tourism – WAYN [16] (travel and lifestyle, 10 million), Couchsurfing (traveller-community interaction site, 2.9 million), Travelbuddy (linking travel, 1.6 million), Travellerspoint (travel community blogsite, 0.3 million). All of the most popular SNSs contain information that may be exploited in travel and tourism – Facebook as well as other top sites like Twitter or LinkedIn are full of travel-related ads and help all kinds of travellers to find what they are looking for [17].

Of course, the above mentioned most popular SNSs may be used for promoting travel and tourism. However, they do not focus on travel and tourism like some other sites. One of the rankings of the best SNSs in the field of travel and tourism [15] features at the top two general SNSs (Facebook and Twitter), which are followed by

WAYN, Airbnb.com and TripAdvisor. Ali and Frew [11] list among the most popular travel-related SNSs WAYN, Couchsurfing, Travelbuddy and Travellerspoint. Figure 2 below illustrates the five best network sites used in travel and tourism.

Fig. 2. Five best social network sites used in travel and tourism [15]

WAYN [16] was initially an entirely travel-related SNS connecting people who happened to be in the same location. Later, however, it widened its scope to dating and other activities [17]. Its users create their profile and upload photographs. WAYN users can ask for travel recommendations by posting questions to other users. WAYN also helps its users plan their trips. If one looks for a destination, WAYN provides relevant information about accommodation, best photos, top questions and answers, travellers tips, tours and attractions and much more. Alternatively, one can look for top destinations for various kinds of activities or attractions, such as hiking, cycling, beautiful architecture, or beautiful scenery, based on WAYN users' votes. WAYN users may view their destination list, or share with other users memories of a place they all visited in the Who's Around section. It is also possible to add images to one's destinations. Last but not least, WAYN's members and experts also determine Top Places in several categories.

Airbnb.com [17] originally offered short-term living quarters, breakfast and a unique business networking opportunity [15]. Airbnb is still mainly for those who are looking for accommodation in various places around the world. In order to become a user, one must sign up and create their own personal profile. The Airbnb official website [17] says Airbnb host network covers 190 countries and 34,000 cities. Its users may check photos of offered accommodation, host profiles, and reviews. Airbnb users can narrow their search according to the type of accommodation, its price, and location. The site makes it easy to contact hosts and book one's stay.

TripAdvisor [18] is rather a travel website than an SNS [15]. It enables anybody to book hotels, flights, and vacation rentals, to find restaurants and things-to-do in one's destination. It updates travellers about the weather forecast for particular destinations, offers forums, reviews, traveller articles, travel guides, it also shows maps, calls the traveller's attention to most popular places, traveller photographs, and much more.

Couchsurfing [19] seems to be very similar to Airbnb as it is a service that connects its members who sign in and complete their profiles featuring their home base, lifestyle, mission and what they consider important. Couchsurfing members make up a global community of travellers who share their homes with other couchsurfers. They can also create local communities by means of Place Page. Locally, they hold and attend more or less regular events. Globally, they choose places to visit and look for potential hosts there by sending Couchrequests. Members may become hosts themselves.

Travelbuddy [20] is a website whose users look for people to travel with. It is possible to set specific search criteria, like sex and age of a potential travel buddy, destinations one wants to visit, and travel dates.

Travellerspoint [21] is another travel community website. It offers highlights, where anybody can create their own travel blog or find advice on trip preparation. There is also a forum for those who want to ask or inform others about virtually anything. Users can join various groups or upload travel photographs. It is possible to look there for accommodation tips, users can create maps of their travels and use a travel planner. The website also features travel guides for various regions, subregions, countries and territories.

All in all, travel and tourism can be promoted by means of both general and traveland-tourism-orientated SNSs. The general ones usually contain travel ads. Companies active in travel and tourism have their fan sites there. SNSs promoting travel and tourism can be divided into two categories. The likes of WAYN, TripAdvisor, Travellerspoint provide their users with information about destinations and enable them to exchange their experience and knowledge about places, attractions and activities. SNSs like Airbnb.com, Couchsurfing, or Travelbuddy focus on facilitating contacts among people as they put together those who look for and provide accommodation and/or company on trips.

4 Discussion of the Findings

As the findings show, there is an increasing number of successful SNSs used for the travel and tourism purposes. However, the most popular SNSs are still Facebook and Twitter. A case study by Buted et al. [22] also shows that the most popular SNSs for tourism industry in Batangas province, Philippines, are Facebook, Twitter and YouTube, which serve as good tools for the dissemination of information very fast and at low costs. On the contrary, the negative aspect is that travellers' opinions are not well presented, which leads to bad impressions and unfair criticism.

In addition, online communities have a strong impact on travellers' decisions and on the overall image and marketing of a particular destination (cf. [23]). As Kiralova & Pavlicek [24] state, social network sites can help destinations to remain competitive if they present attractive content, exploit creativity and support and stimulate interactive communication. However, to have an influence on travellers' decisions, they must be excellent in a sense of resembling the most glossy and popular magazines. Moreover, they should address travellers as individuals, i.e., they should be personalized. But they should also be dynamic and interactive and provide travellers with a unique experience (cf. [25]).

Karnstedt et al. [26] list seven benefits SNSs might have for travel and tourism destination organizations, which include: (1) solicit endorsements; (2) maximize revenue per seat; (3) bond with guests; (4) manage reputation; (5) reach out to new customers; (6) recruit new staff; and (7) build a buzz.

Table 1 below then summarizes the main benefits and limitations of SNSs for travel and tourism industry.

Table 1. Benefits and limitations of SNSs for travel and tourism industry

Benefits	Limitations
<ul style="list-style-type: none"> • They are able to address a big number of global travellers at relatively low costs and higher level of efficiency; 	<ul style="list-style-type: none"> • They can spread a negative review of some destinations like a wildfire; information does not have to be credible, objective or useful; they can be abused by travellers and employees in exposing an employer's trade secrets or business proprietary information [26];
<ul style="list-style-type: none"> • They enable to build and maintain a community of interest; 	
<ul style="list-style-type: none"> • They enable twenty four hours operations regardless different time zones; 	
<ul style="list-style-type: none"> • They enable to post and present travellers' current photos, videos, opinions, experience or experiences; 	
<ul style="list-style-type: none"> • They are valuable source of word-of-mouth recommendations; 	<ul style="list-style-type: none"> • It is difficult to orientate among loads of various platforms and messages;
<ul style="list-style-type: none"> • They help to build brand equity; 	
<ul style="list-style-type: none"> • They provide feedback for destination management organizations; 	<ul style="list-style-type: none"> • There is no control over the wordof-mouth.
<ul style="list-style-type: none"> • They enable businesses to instantly react to emerging trends.

5 Conclusion

Currently, social network sites have a tremendous influence on how tourists create, organize and share tourism experiences (cf. [27]). And since tourism is the main source of revenue in many countries and regions, tourist destination organizations should bear this fact on their mind and take a challenge to promote their places via SNSs because SNSs represent strategic importance for tourism competitiveness [28]. Moreover, SNSs can lower costs, increase operational efficiency and improve service quality and customer experience [29].
